

MODULAR CONSTRUCTION FAQ

PART 2

BASE⁴

Architects | Engineers | Designers

Q-9

Why do modular projects require more cash upfront?

Factory slots, design, and shop drawings are front-loaded.

BASE4 fixes this with phased designs tied to production and a cash-flow curve aligned to financing.

Q-10

Will lenders actually finance modular?

Yes. Many do so today—if provided with detailed plans, inspections, QA processes, and logistics clarity. **BASE4** delivers lender packets with schedules, O&M docs, insurance, and full approvals.

Q-11

What happens if a factory slips—or fails?

BASE4 qualifies multiple backup factories and standardizes modular geometry, plus includes advance-payment protections and ramp definitions (panelized/hybrid).

Q-12

How do insurance and bonding work?

You'll need a builder's risk that covers offsite fabrication, in-transit, and onsite work. **BASE4** fixes this with insurance matrixes (plant, transit, crane, set, site).

Q-13

Is resale/refi risk higher for modular?

No. Modular meets the same codes as site-built.

BASE4 supplies appraisals, cost breakdowns, O&M docs, and closeout packages.

FINANCING & RISK

Q-14

Are change orders possible after production starts?

Yes, but limited. **BASE4** manages this through early design freezes, approvals, and detailed Interface Matrices.

Q-15

Who manages what between GC, factory, and design team?

BASE4 coordinates MEP, envelope, inspections, and site tie-ins.

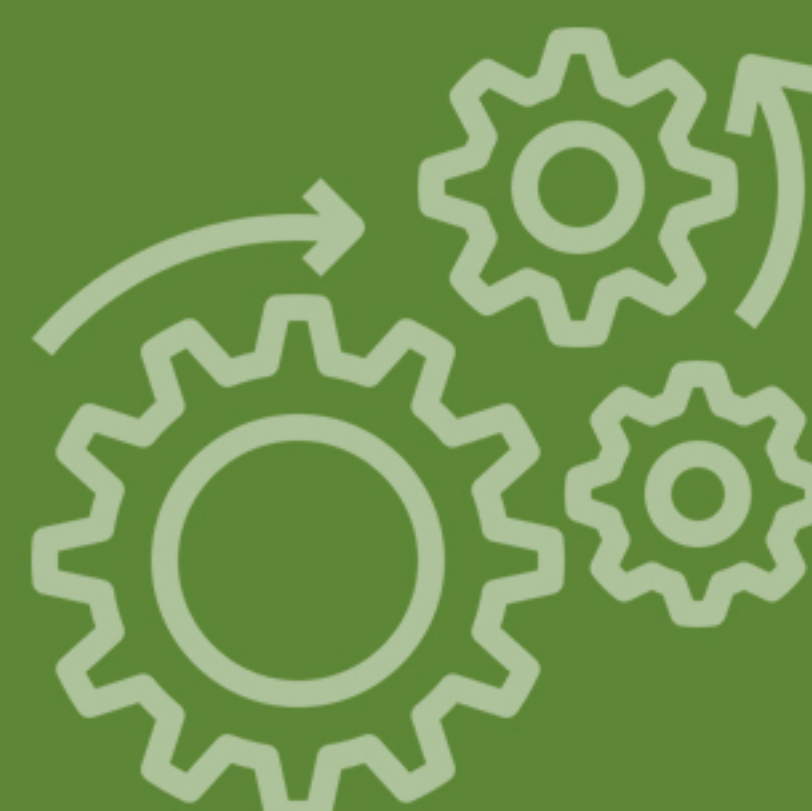

Our RAC + Interface Matrix defines scope, control points, and responsibilities.

Q-16

How do inspections work?

Inspections occur at the factory, onsite, and by the AHJ.

BASE4 integrates factory reports, third-party inspectors, and AHJ approvals into one process.

PROCESS & RESPONSIBILITIES

Q-17

Are logistics and craning big risks?

They can be—permits, escorts, staging, and crane time all add cost and risk.

BASE4 reduces this with route surveys, **Site Readiness Kits**, and staging drawings.

Q-18

What if modules are damaged in transit or onsite?

BASE4 fixes with packaging specs, tie-down details, transport photos, and onsite protection protocols.

Q-19

How do we keep the site from holding up the set?

BASE4 ensures foundation, utilities, and site work are set in advance with daily huddles and gating criteria.

LOGISTICS & SITE READINESS

Q-20

Will the building look “cheap” or temporary?

No. Modular meets brand-approved finishes and design standards identical to site-built. **BASE4** also offers finish boards and brand reviews to reinforce quality.

Q-21

Why BASE4 for modular projects?

-  **200 architects & engineers worldwide** (24-hour work cycle)
-  **All services in-house:** A/E/M/P/Structural/Visualization
-  **100% Revit/BIM** for coordinated, buildable details
-  **Modular expertise** to deliver **faster, cheaper**, with fewer surprises

WHY BASE⁴
