

PANELIZED COLD-FORMED STEEL (CFS)

A Smarter, Safer, and More Predictable Way to Build

Developers are turning to CFS panels for one simple reason — lower insurance costs and faster, cleaner builds.

WHY DEVELOPERS ARE SWITCHING

01 Lower Insurance Costs
Reduced fire + mold risk means major savings.

02 Faster Construction
Factory-made panels cut build time by weeks.

CFS PANELIZED vs. TRADITIONAL WOOD

Factor	CFS Panelized	Traditional Wood
 Insurance Costs	 Lower	 Higher
 Fire Risk	 Resistant	 Vulnerable
 Waste	 Minimal	 High
 Build Time	 Faster	 Slower

CFS reduces both risk exposure and construction duration — key savings for developers in high-premium markets.

WHY CFS MAKES FINANCIAL SENSE

Lower premiums
recurring insurance savings

Prefabricated accuracy
reduces rework

Fewer crews + shorter schedules
less overhead

Predictable performance
+ strong resale value

WE DESIGN FOR CFS START-TO-FINISH

BASE4 delivers integrated A/E designs tailored for CFS projects—covering structural, MEP, and architectural coordination to eliminate costly redesigns.

Faster approvals

CFS-ready drawings

Lower VE changes
